Office Memorandum • UNITED STATES GOVERNMENT

TO : The Files - RD-76, T.O. F

DATE: 29 May 1959

FROM :

25X1

SUBJECT: Trip Report - Miniature 3-Channel Data Recorder, CB-3

1. On 21 and 22 May 1959 a trip was made to the [redacted] [redacted] Primary purpose of the trip was to monitor the progress of the subject task. The project was discussed with the following cognizant personnel:

25X1

25X1

[redacted] Project Supervisor
- Project Engineer

25X1

2. This task provides for the development of a miniature 3-channel data recorder, CB-3 and a 3-channel playback recorder, CB-4. The development of these two units was completed and equipment shipped to the Agency; however, the CB-4 unit was damaged during shipment and had to be returned to the contractor for repairs.

3. The contractor has completed the necessary repairs and the CB-4 appears to have been improved considerably in ease of operation, appearance and packaging. Previous shipping troubles were discussed with the cognizant engineer and methods of eliminating possible damage in shipment again were finalized. The tape deck, the DC power supply, and the AC regulated power supply which represents the majority of the weight will be removed from the equipment rack and packaged separately. Then all of the packages will be secured to an electro-pallet and shipped from the plant by truck to [redacted] warehouse. The test and inspection section of MSB will examine the unit for possible damage and check the contents of the shipment against the list of delivered items. Two operating manuals will be included with the equipment and 5 copies of the final engineering report will be forwarded to the writer by the contractor.
